ECO DELTA High Efficiency Mono SHINGLED MODULE

9A-->1.8A

Shingled modules use ECA instead of solder ribbon and reduce cracking among cells during production and it can also improve greatly the reliability in outdoors.

Adhesive cures at 150 °C, lower thermal stress. Conventional welding, High temperature soldering >250 °C

Technical features of shingled module

Lower String Current

Isc of a full cell is ~9A, and the 1/5 shingle has an Isc of (~1.8A)

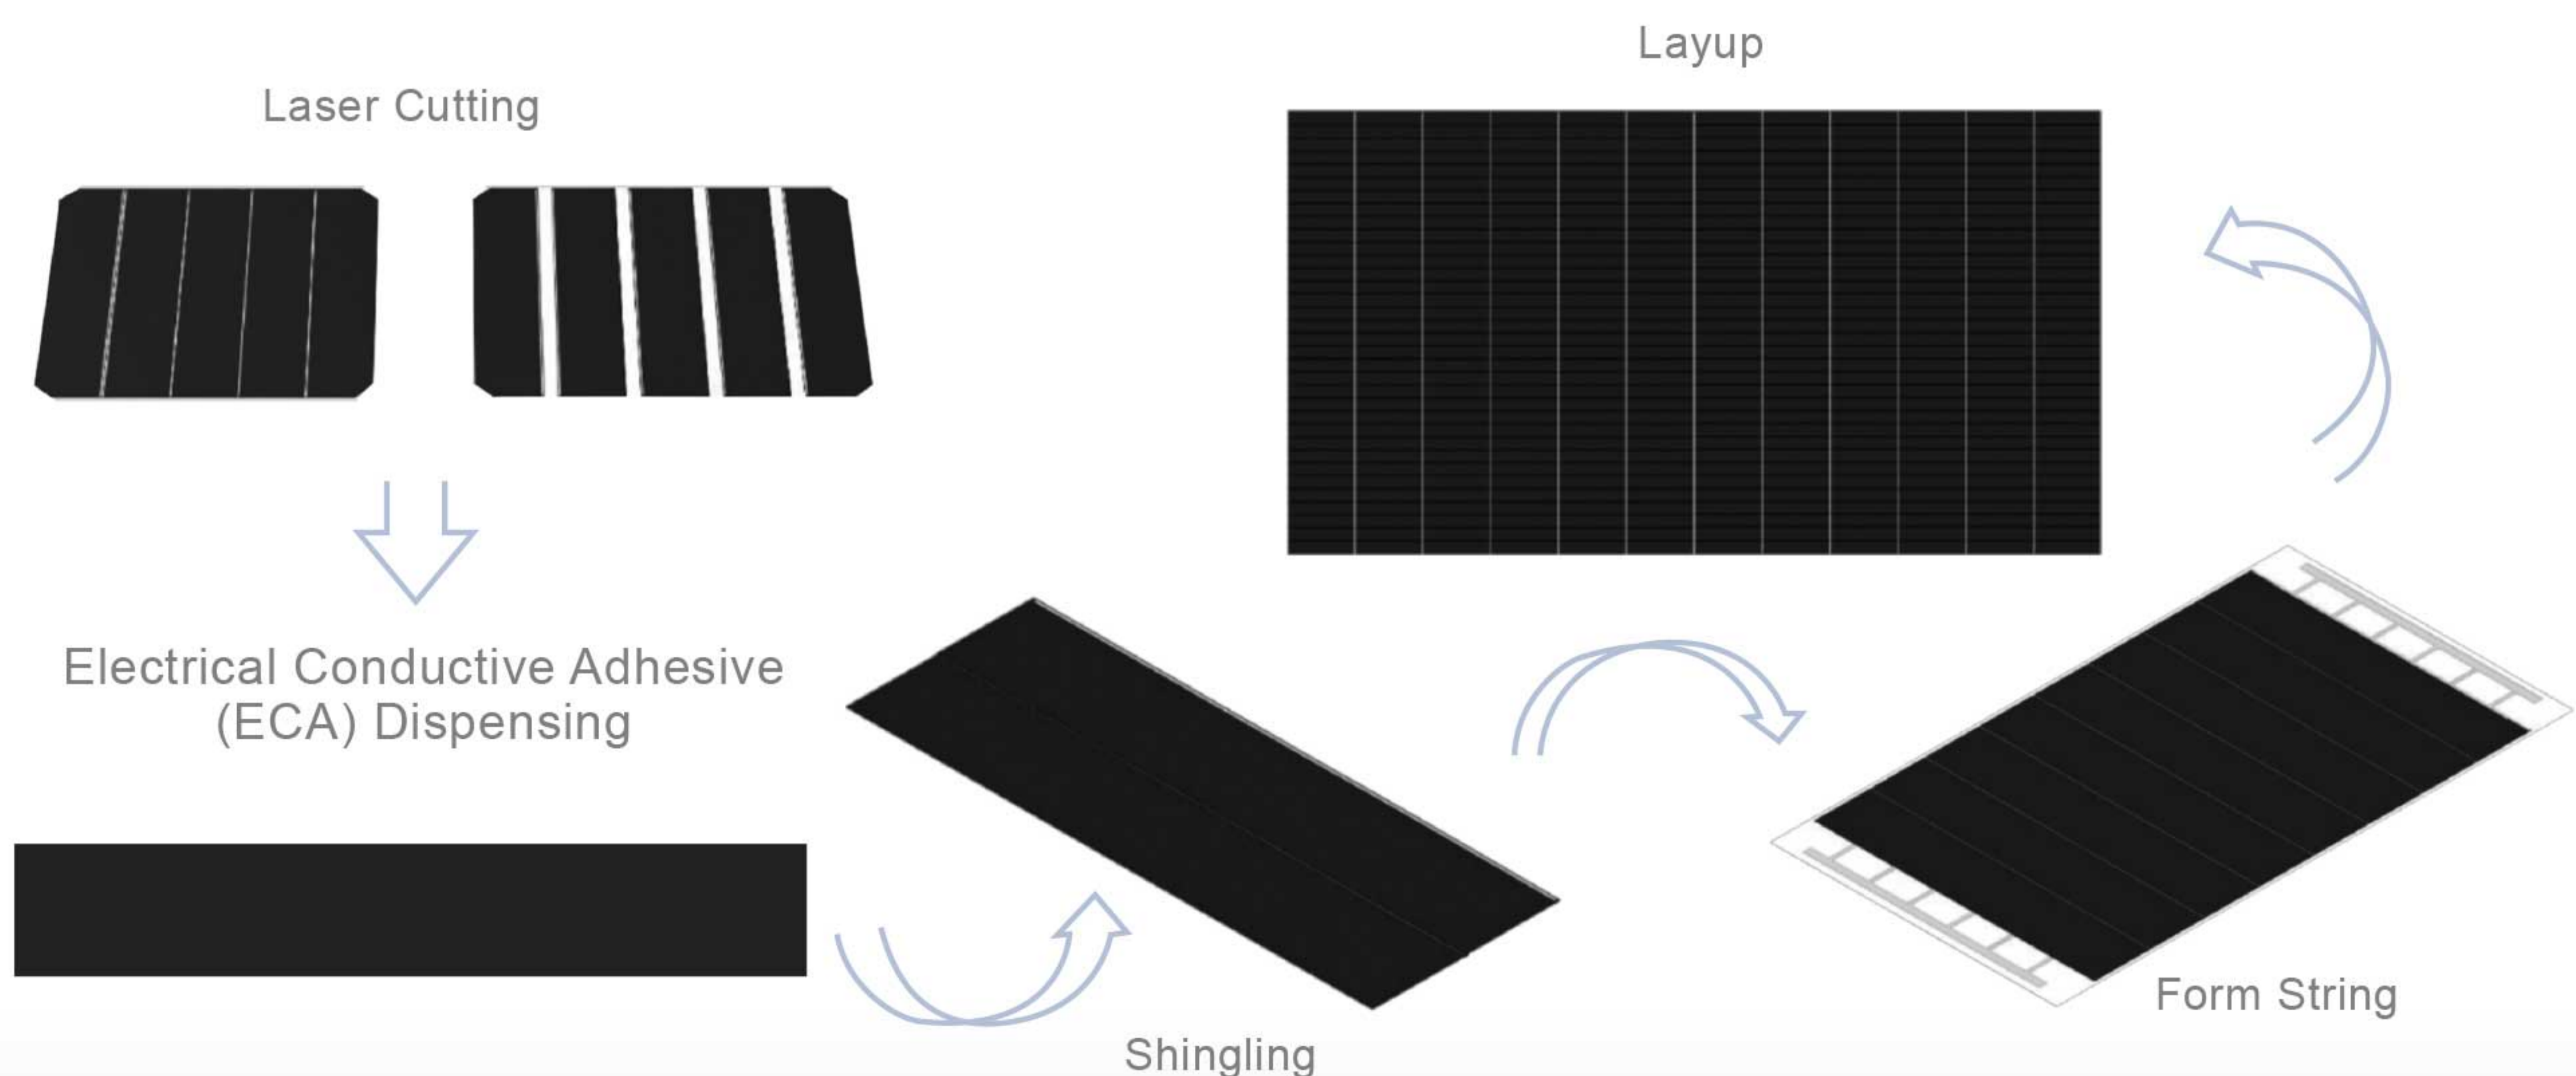

Lower Operating Temperature

Lower string current results in lower cell operating temperature (-5 °C)

Technical features of shingled module (under load)

Shingled module Vs Half-Cut module - Less Influences from Shadows

Case Study

When the panels are installed in portrait orientation, shingled modules have the best output under horizontal shading!
Half-cut module is covered and stop modules from working, while shingled module still has power generation.
